## RateMate® Web Service URL:

<http://RateMateWS.Truckstop.com/RateMateWebService.asmx>

## RateMate® Web Service Requests:

### 1. ***Request All Rates*** : Returns All the Rate information for Posted, Paid, and Submitted

- **GetAllRates** – Returns Paid, Posted, and Submitted Rates, Depending on passed requirements, for City to City with a search area or State to State

- **Required for State to State**

1. string StartingState
2. string DestState
3. enum TOE
4. string UserName
5. string Password
6. int IntegrationID

- **Required for City to City**

1. string StartingCity
2. string StartingState
3. string DestCity
4. string DestState
5. enum TOE
6. string UserName
7. string Password
8. int IntegrationID

- **Returns**

- RateData

## ➤ Code Examples

### ***C# Requesting All Rates For City to City***

```
...  
  
//Create Request Object  
RateMateRequest myRequest = new RateMateRequest();  
  
myRequest.StartingCity = "Boise";  
myRequest.StartingState = "ID";  
myRequest.DestinationCity = "Denver";  
myRequest.DestinationState = "CO";  
myRequest.SearchArea = Range.Range_150;  
myRequest.EquipmentType = TOE.Flat;  
myRequest.UserName = "xxxxx";  
myRequest.Password = "xxxxx";  
myRequest.IntegrationID = xxxxx;  
//Create Webservice object  
RateMateWebService myService = new RateMateWebService();  
//Make Request to Webservice  
RateData myRateData = myService.GetAllRates(myRequest);  
  
Console.WriteLine(myRateData.PaidRates.Last12Months.AverageTotalRate.ToString());  
  
...
```

### ***VB.NET Requesting All Rates For State to State***

```
...  
  
'Create instance of the ratemate Request object  
Dim myRequest As RateMateRequest = New RateMateRequest  
myRequest.DestinationCity = "Denver"  
myRequest.DestinationState = "CO"  
myRequest.StartingCity = "Boise"  
myRequest.StartingState = "ID"  
myRequest.SearchArea = Range.Range_150  
myRequest.EquipmentType = TOE.Flat  
myRequest.UserName = "xxxxx"  
myRequest.Password = "xxxxx"  
myRequest.IntegrationID = xxxxx  
  
'Create instance of the Web Service Object  
Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService  
'Process the request  
Dim myRateData As RateMateWebService.RateData = myService.GetAllRates(myRequest)  
'out put the result  
Console.WriteLine(myRateData.PostedRates.Last12Months.AverageTotalRate.ToString())  
  
...
```

### ***JAVA using JAX-WS Requesting All Rates For City to City***

```
...  
  
// Call Web Service Operation  
webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();
```

```

webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();

//Create Request Object
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingCity = "Boise";
myRequest.startingState = "ID";
myRequest.destinationCity = "Denver";
myRequest.destinationState = "CO";
myRequest.searchArea = Range.RANGE_150;
myRequest.equipmentType = TOE.VAN;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.RateData result = port.getAllRates(myRequest);
// out put result
System.out.println(result.paidRates.last12Months.averageMiles);
...

```

## 2. ***Request Posted Rate:** Returns Posted Rate Information*

- **GetPostedRates** – Returns Posted Rates, Depending on passed requirements, for City to City with a search area or State to State
  - **Required for State To State**
    1. string StartingState
    2. string DestState
    3. enum TOE
    4. string UserName
    5. string Password
    6. int IntegrationID
  - **Required for City To City**
    1. string StartingCity
    2. string StartingState
    3. string DestCity
    4. string DestState
    5. enum TOE
    6. enum Range
    7. string UserName
    8. string Password

9. int IntegrationID

➤ **Returns**

- PostedRates

➤ **Code Examples**

***C# Requesting Posted Rates For State to State***

```
...  
  
//Create Request Object  
RateMateRequest myRequest = new RateMateRequest();  
  
myRequest.StartingState = "ID";  
myRequest.DestinationState = "CO";  
myRequest.EquipmentType = TOE.Flat;  
myRequest.UserName = "xxxxx";  
myRequest.Password = "xxxxx";  
myRequest.IntegrationID = xxxxx;  
  
//Create Webservice object  
RateMateWebService myService = new RateMateWebService();  
//Make Request to Webservice  
PostedRates myPosted = myService.GetPostedRates(myRequest);  
//output result  
Console.Write(myPosted.Last90Days.AverageMiles.ToString());  
  
...
```

***VB.NET Requesting Posted Rates For State to State***

```
...  
  
'Create instance of the ratemate Request object  
Dim myRequest As RateMateRequest = New RateMateRequest  
myRequest.DestinationState = "CO"  
myRequest.StartingState = "ID"  
myRequest.EquipmentType = TOE.Flat  
myRequest.UserName = "xxxxx"  
myRequest.Password = "xxxxx"  
myRequest.IntegrationID = xxxxx  
  
'Create instance of the Web Service Object  
Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService  
'Process the request  
Dim myPostedRates As RateMateWebService.PostedRates = myService.GetPostedRates(myRequest)  
'out put the result  
Console.Write(myPostedRates.Last12Months.AverageMiles.ToString())  
  
...
```

***JAVA using JAX-WS Requesting Posted Rates For State to State***

...

```

// Call Web Service Operation
webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();
webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();

//initialize WS operation arguments here
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingState = "ID";
myRequest.destinationState = "CO";
myRequest.equipmentType = TOE.VAN;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.PostedRates result = port.getPostedRates(myRequest);
// out put result
System.out.println(result.last12Months.averageMiles);
...

```

### 3. ***Request Paid Rate : Returns Paid Rate information***

- **GetPaidRates** - Returns Paid Rates, Depending on passed requirements, for City to City with a search area or State to State
  - **Required for State To State**
    1. string StartingState
    2. string DestState
    3. enum TOE
    4. string UserName
    5. string Password
    6. int IntegrationID
  - **Required for City To City**
    1. string StartingCity
    2. string StartingState
    3. string DestCity
    4. string DestState
    5. enum TOE
    6. enum Range
    7. string UserName
    8. string Password

7. int IntegrationID

- **Returns**
  - PaidRates
- **Code Examples**

### ***C# Requesting Paid Rates For State to State***

```
...  
  
//Create Request Object  
RateMateRequest myRequest = new RateMateRequest();  
  
myRequest.StartingState = "ID";  
myRequest.DestinationState = "CO";  
myRequest.EquipmentType = TOE.Flat;  
myRequest.UserName = "xxxxx";  
myRequest.Password = "xxxxx";  
myRequest.IntegrationID = xxxxx;  
  
//Create Webservice object  
RateMateWebService myService = new RateMateWebService();  
//Make Request to Webservice  
PaidRates myPaidRates = myService.GetPaidRates(myRequest);  
//output result  
Console.WriteLine(myPaidRates.Last90Days.AverageTotalRate.ToString());  
  
...
```

### ***VB.NET Requesting Paid Rates For State to State***

```
...  
  
'Create instance of the ratemate Request object  
Dim myRequest As RateMateRequest = New RateMateRequest  
myRequest.DestinationState = "CO"  
myRequest.StartingState = "ID"  
myRequest.EquipmentType = TOE.Flat  
myRequest.UserName = "xxxxx"  
myRequest.PassWord = "xxxxx"  
myRequest.IntegrationID = xxxxx  
  
'Create instance of the Web Service Object  
Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService  
'Process the request  
Dim myPaidRates As RateMateWebService.PaidRates = myService.GetPaidRates(myRequest)  
'out put the result  
Console.WriteLine(myPaidRates.Last90Days.AverageMiles.ToString())  
  
...
```

### ***JAVA using JAX-WS Requesting Paid Rates For State to State***

```
...
```

```

// Call Web Service Operation
webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();
webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();

//initialize WS operation arguments here
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingState = "ID";
myRequest.destinationState = "CO";
myRequest.equipmentType = TOE.VAN;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.PaidRates result = port.getPaidRates(myRequest);
// out put result
System.out.println(result.last12Months.numberOfReports);
...

```

#### **4. Request Submitted Rate: Returns Submitted Rate information**

- **GetSubmittedRates** - Returns Submitted Rates, Depending on passed requirements, for City to City with a search area or State to State
  - **Required for State To State**
    1. string StartingState
    2. string DestState
    3. enum TOE
    4. string UserName
    5. string Password
    6. int IntegrationID
  - **Required for City to City**
    1. string StartingCity
    2. string StartingState
    3. string DestCity
    4. string DestState
    5. enum TOE
    6. enum Range
    7. string UserName
    8. string Password

9. int IntegrationID

➤ **Returns**

- SubmittedRates

➤ **Code Examples**

***C# Requesting Submitted Rates For State to State***

```
...  
    //Create Request Object  
    RateMateRequest myRequest = new RateMateRequest();  
  
    myRequest.StartingState = "ID";  
    myRequest.DestinationState = "CO";  
    myRequest.EquipmentType = TOE.Flat;  
    myRequest.UserName = "xxxxx";  
    myRequest.Password = "xxxxx";  
    myRequest.IntegrationID = xxxxx;  
  
    //Create Webservice object  
    RateMateWebService myService = new RateMateWebService();  
    //Make Request to Webservice  
    SubmittedRates mySubmitted = myService.GetSubmittedRates(myRequest);  
    //output result  
    Console.WriteLine(mySubmitted.Last12Months.NumberOfReports.ToString());  
...
```

***VB.NET Requesting Submitted Rates For State to State***

```
...  
    'Create instance of the ratemate Request object  
    Dim myRequest As RateMateRequest = New RateMateRequest  
    myRequest.DestinationState = "CO"  
    myRequest.StartingState = "ID"  
    myRequest.EquipmentType = TOE.Flat  
    myRequest.UserName = "xxxxx"  
    myRequest.Password = "xxxxx"  
    myRequest.IntegrationID = xxxxx  
  
    'Create instance of the Web Service Object  
    Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService  
    'Process the request  
    Dim mySubmittedRates As RateMateWebService.SubmittedRates = myService.GetSubmittedRates(myRequest)  
    'out put the result  
    Console.WriteLine(mySubmittedRates.Last12Months.NumberOfReports.ToString())  
...
```

***JAVA using JAX-WS Requesting Submitted Rates For State to State***

```
...  
    // Call Web Service Operation  
    webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();
```

```

webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();

//initialize WS operation arguments here
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingState = "ID";
myRequest.destinationState = "CO";
myRequest.equipmentType = TOE.VAN;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.SubmittedRates result = port.getSubmittedRates(myRequest);
// out put result
System.out.println(result.last12Months.numberOfReports);
...

```

## Historical Rate Web Service Requests

### 1. ***Request Historical Rate:** Returns Historical Rate trending information*

- **GetHistoricalRates** - Returns Historical Rates information, Depending on passed requirements, for City to City with a search area or State to State
  - **Required for State To State**
    1. string StartingState
    2. string DestState
    3. enum TOE
    4. string UserName
    5. string Password
    6. int IntegrationID
  - **Required for City To City**
    1. string StartingCity
    2. string StartingState
    3. string DestCity
    4. string DestState
    5. enum TOE
    6. enum Range
    7. string UserName
    8. string Password
    9. int IntegrationID

- **Returns**
  - HistoricalRates
- **Code Examples**

### ***C# Requesting Historical Rates For City to City***

```
...
    //Create Request Object
    RateMateRequest myRequest = new RateMateRequest();

    myRequest.StartingCity = "Boise";
    myRequest.StartingState = "ID";
    myRequest.DestinationCity = "Denver";
    myRequest.DestinationState = "CO";
    myRequest.EquipmentType = TOE.Flat;
    myRequest.SearchArea = Range.Range_150;
    myRequest.UserName = "xxxxx";
    myRequest.Password = "xxxxx";
    myRequest.IntegrationID = xxxxx;

    //creating instance of ratemate webservice object
    RateMateWebService myService = new RateMateWebService();
    // process result here
    HistoricalRates myHistorical = myService.GetHistoricalRates(myRequest);
    // out put result
    Console.WriteLine(myHistorical.MaxRate.ToString());
...

```

### ***VB.NET Requesting Historical Rates For City to City***

```
...
'Create instance of the ratemate Request object
Dim myRequest As RateMateRequest = New RateMateRequest
myRequest.DestinationCity = "Denver"
myRequest.DestinationState = "CO"
myRequest.StartingCity = "Boise"
myRequest.StartingState = "ID"
myRequest.EquipmentType = TOE.Flat
myRequest.SearchArea = Range.Range_150
myRequest.UserName = "xxxxx"
myRequest.Password = "xxxxx"
myRequest.IntegrationID = xxxxx

'Create instance of the Web Service Object
Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService
'Process the request
Dim myHistoricalRates As RateMateWebService.HistoricalRates = myService.GetHistoricalRates(myRequest)
'out put the result
Console.WriteLine(myHistoricalRates.MaxRate.ToString())
...

```

## ***JAVA using JAX-WS Requesting Historical Rates For City to City***

```
...
// Call Web Service Operation
webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();
webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();

//initialize WS operation arguments here
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingCity = "Boise";
myRequest.startingState = "ID";
myRequest.destinationCity="Denver";
myRequest.destinationState = "CO";
myRequest.equipmentType = TOE.VAN;
myRequest.searchArea = Range.RANGE_100;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.HistoricalRates result = port.getHistoricalRates(myRequest);
// out put result
System.out.println(result.maxRate);
...
```

## **Fuel Surcharge Web Service Requests**

### ***1. Request Fuel Surcharge: Returns Fuel Cost & surcharge information***

- **GetFuelSurcharge** – Returns Fuel price and Fuel Surcharge information including
  - **Required**
    1. string StartingCity
    2. string StartingState
    3. string DestCity
    4. string DestState
    5. double MPG
    6. string UserName
    7. string Password
    8. int IntegrationID
- **Returns**
  - FuelSurcharge

## ➤ Code Examples

### ***C# Requesting Fuel Surcharge For City to City***

```
...  
  
//creating instance of Request Object  
RateMateRequest myRequest = new RateMateRequest();  
  
myRequest.StartingCity = "Boise";  
myRequest.StartingState = "ID";  
myRequest.DestinationCity = "Denver";  
myRequest.DestinationState = "CO";  
myRequest.MilesPerGallon = 5.5;  
myRequest.UserName = "xxxxx";  
myRequest.Password = "xxxxx";  
myRequest.IntegrationID = xxxxx;  
  
//creating instance of ratemate webservice object  
RateMateWebService myService = new RateMateWebService();  
// process Request here  
FuelSurcharge myFuelSurcharge = myService.GetFuelSurcharge(myRequest);  
  
// output result  
Console.WriteLine(myFuelSurcharge.SurchargeTotal);  
...
```

### ***VB.NET Requesting Fuel Surcharge For City to City***

```
...  
  
'Create instance of the ratemate Request object  
Dim myRequest As RateMateRequest = New RateMateRequest  
myRequest.DestinationCity = "Denver"  
myRequest.DestinationState = "CO"  
myRequest.StartingCity = "Boise"  
myRequest.StartingState = "ID"  
myRequest.MilesPerGallon = 5.5  
myRequest.EquipmentType = TOE.Flat  
myRequest.UserName = "xxxxx"  
myRequest.Password = "xxxxx"  
myRequest.IntegrationID = xxxxx  
  
'Create instance of the Web Service Object  
Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService  
'Process the request  
Dim myFuelSurcharge As RateMateWebService.FuelSurcharge = myService.GetFuelSurcharge(myRequest)  
'out put the result  
Console.WriteLine(myFuelSurcharge.SurchargePerMile.ToString())  
...
```

### ***JAVA using JAX-WS Requesting Fuel Surcharge For City to City***

```
...  
  
// Call Web Service Operation  
webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();  
webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();
```

```

//initialize WS operation arguments here
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingCity = "Boise";
myRequest.startingState = "ID";
myRequest.destinationCity="Denver";
myRequest.destinationState = "CO";
myRequest.equipmentType = TOE.VAN;
myRequest.milesPerGallon = 5.5;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.FuelSurcharge result = port.getFuelSurcharge(myRequest);
// out put result
System.out.println(result.surchargePerMile);
...

```

## Supply & Demand Web Service Requests

### 1. ***Request Negotiation Data:** Returns Supply and demand information for Trucks*

#### ➤ **GetNegotiationData** – Returns Negotiation information

##### • **Required**

1. string StartingCity
2. string StartingState
3. string DestCity
4. string DestState
5. enum TOE
6. string UserName
7. string Password
8. int IntegrationID

#### ➤ **Returns**

- NegotiationData

#### ➤ **Code Examples**

### ***C# Requesting Negotiation Data For City to City***

```

...
//creating instance of Request Object

```

```

RateMateRequest myRequest = new RateMateRequest();

myRequest.StartingCity = "Boise";
myRequest.StartingState = "ID";
myRequest.DestinationCity = "Denver";
myRequest.DestinationState = "CO";
myRequest.EquipmentType = TOE.Flat;
myRequest.UserName = "xxxxx";
myRequest.Password = "xxxxx";
myRequest.IntegrationID = xxxxx;

//creating instance of ratemate webservice object
RateMateWebService myService = new RateMateWebService();
// process Request here
NegotiationData myNegotiationData = myService.GetNegotiationData(myRequest);

// output result
Console.Write(myNegotiationData.StartingNegotiationStrength);
...

```

### ***VB.NET Requesting Negotiation Data For City to City***

```

...
'Create instance of the ratemate Request object
Dim myRequest As RateMateRequest = New RateMateRequest
myRequest.StartingCity = "Boise"
myRequest.StartingState = "ID"
myRequest.DestinationCity = "Denver"
myRequest.DestinationState = "CO"
myRequest.EquipmentType = TOE.Flat
myRequest.UserName = "xxxxx"
myRequest.Password = "xxxxx"
myRequest.IntegrationID = xxxxx

'Create instance of the Web Service Object
Dim myService As RateMateWebService.RateMateWebService = New RateMateWebService.RateMateWebService
'Process the request
Dim myNegotiationData As RateMateWebService.NegotiationData = myService.GetNegotiationData(myRequest)
'out put the result
Console.Write(myNegotiationData.DestinationNegotiationStrength)
...

```

### ***JAVA using JAX-WS Requesting Negotiation Data For City to City***

```

...

// Call Web Service Operation

webserviceuser.RateMateWebService service = new webserviceuser.RateMateWebService();
webserviceuser.RateMateWebServiceSoap port = service.getRateMateWebServiceSoap12();

//initialize WS operation arguments here
webserviceuser.RateMateRequest myRequest = new webserviceuser.RateMateRequest();
myRequest.startingCity = "Boise";
myRequest.startingState = "ID";
myRequest.destinationCity="Denver";
myRequest.destinationState = "CO";

```

```
myRequest.equipmentType = TOE.VAN;
myRequest.userName = "xxxxx";
myRequest.password = "xxxxx";
myRequest.integrationID = xxxxx;

// process result here
webserviceuser.NegotiationData result = port.getNegotiationData(myRequest);
// out put result
System.out.println(result.startingNegotiationStrength);

...
```

## Object Descriptions

### ***Enum TOE***

1. TOE.Van (int value 0)
2. TOE.Refrigerated (int value 1)
3. TOE.Flat (int value 2)
4. TOE.Specialized (int value 3)

### ***Enum Range***

1. Range\_100 (int value 100)
2. Range\_150 (int value 150)
3. Range\_State (int value 0)

### ***Object RateMateRequest***

- string StartingCity
- string StartingState
- string DestinationCity
- string DestinationState
- string UserName
- string Password
- int IntegrationID
- double MilesPerGallon (Numerical value between 0.1 and 9.9, default value 5.5)
- TOE EquipmentType
- Range SearchArea

### ***Object PostedRates***

- Rate Last7Days

- Rate Last15Days
- Rate Last30Days
- Rate Last90Days
- Rate Last12Months
- Rate[] RateCollection
- enum Range
- Bool HasData

### ***Object PaidRates***

- Rate Last30Days

### ***PHP***

Here are some libraries for using web services in php

<http://truckstop.com/community/php/phplibs.zip>

### ***PHP Requesting All Rates For City to City***

...

```
//prepare the SOAP client request
```

```
$myrequest = array();
```

```
$myrequest["StartingCity"] = "Boise";
```

```

$myrequest["StartingState"] = "ID";
$myrequest["DestinationCity"] = "Denver";
$myrequest["DestinationState"] = "CO";
$myrequest["EquipmentType"] = "Van";
$myrequest["SearchArea"] = "Range_150";
$myrequest["MilesPerGallon"] = "20";
$myrequest["UserName"] = "xxxxxx";
$myrequest["Password"] = "xxxxxx";
$myrequest["IntegrationID"] = "xxxxxx";

$SOAPAction = 'GetAllRates';
$SOAPPath = "http://Truckstop.com/webservices";
$URL = 'http://RateMateWS.Truckstop.com/RateMateWebService.asmx';

//send the SOAP request and receive the response
$response = soaprequest($URL, $SOAPPath, $SOAPAction, $myrequest);
echo $response;

...

```

### ***PHP Requesting Posted Rates For State to State***

```

...
//prepare the SOAP client request
$myrequest = array();
$myrequest["StartingCity"] = "Boise";
$myrequest["StartingState"] = "ID";
$myrequest["DestinationCity"] = "Denver";
$myrequest["DestinationState"] = "CO";
$myrequest["EquipmentType"] = "Van";
$myrequest["SearchArea"] = "Range_150";
$myrequest["MilesPerGallon"] = "20";
$myrequest["UserName"] = "xxxxxx";

```

```

$myrequest["Password"] = "xxxxxx";
$myrequest["IntegrationID"] = "xxxxxx";

$SOAPAction = 'GetPostedRates';
$SOAPPath = "http://Truckstop.com/webservices";
$URL = 'http://RateMateWS.Truckstop.com/RateMateWebService.asmx';

//send the SOAP request and receive the response
$response = soaprequest($URL, $SOAPPath, $SOAPAction, $myrequest);
echo $response;

...

```

### ***PHP Requesting Paid Rates For State to State***

```

...
//prepare the SOAP client request
$myrequest = array();
$myrequest["StartingCity"] = "Boise";
$myrequest["StartingState"] = "ID";
$myrequest["DestinationCity"] = "Denver";
$myrequest["DestinationState"] = "CO";
$myrequest["EquipmentType"] = "Van";
$myrequest["SearchArea"] = "Range_150";
$myrequest["MilesPerGallon"] = "20";
$myrequest["UserName"] = "xxxxxx";
$myrequest["Password"] = "xxxxxx";
$myrequest["IntegrationID"] = "xxxxxx";

$SOAPAction = 'GetPaidRates';
$SOAPPath = "http://Truckstop.com/webservices";
$URL = 'http://RateMateWS.Truckstop.com/RateMateWebService.asmx';

```

```
//send the SOAP request and receive the response
$response = soaprequest($URL, $SOAPPath, $SOAPAction, $myrequest);
echo $response;
...
```

### ***PHP Requesting Submitted Rates For State to State***

```
...
//prepare the SOAP client request
$myrequest = array();
$myrequest["StartingCity"] = "Boise";
$myrequest["StartingState"] = "ID";
$myrequest["DestinationCity"] = "Denver";
$myrequest["DestinationState"] = "CO";
$myrequest["EquipmentType"] = "Van";
$myrequest["SearchArea"] = "Range_150";
$myrequest["MilesPerGallon"] = "20";
$myrequest["UserName"] = "xxxxxx";
$myrequest["Password"] = "xxxxxx";
$myrequest["IntegrationID"] = "xxxxxx";

$SOAPAction = 'GetSubmittedRates';
$SOAPPath = 'http://Truckstop.com/webservices';
$URL = 'http://RateMateWS.Truckstop.com/RateMateWebService.asmx';

//send the SOAP request and receive the response
$response = soaprequest($URL, $SOAPPath, $SOAPAction, $myrequest);
echo $response;
...
```

### ***PHP Requesting Historical Rates For City to City***

```
...
//prepare the SOAP client request
```

```

$myrequest = array();
$myrequest["StartingCity"] = "Boise";
$myrequest["StartingState"] = "ID";
$myrequest["DestinationCity"] = "Denver";
$myrequest["DestinationState"] = "CO";
$myrequest["EquipmentType"] = "Van";
$myrequest["SearchArea"] = "Range_150";
$myrequest["MilesPerGallon"] = "20";
$myrequest["UserName"] = "xxxxx";
$myrequest["Password"] = "xxxxx";
$myrequest["IntegrationID"] = "xxxxx";

$SOAPAction = 'GetHistoricalRates';
$SOAPPath = 'http://Truckstop.com/webservices';
